SUMMARY

An Electronics and Communication Engineering fresher with hands-on experience in full-stack web development, AI automation, and IoT systems. Built WhatsApp-based workflow automation using LLMs, deployed edge AI models on Raspberry Pi, and developed scalable Firebase-backed web applications. Interested in software engineering, AI systems, and real-world automation solutions.

WORK EXPERIENCE

Codsoft – Web Development Intern

June 2025 – July 2025

- Built a Marvel-themed responsive landing page using HTML5 and CSS3 with focus on visual hierarchy and responsive layouts
- Developed a personal portfolio website with smooth navigation and project showcase sections
- Implemented a browser-based calculator in JavaScript supporting arithmetic operations and keyboard input

EDUCATION

B.E. Electronics and Communication Engineering

Nov 2022 – May 2026

Kumaraguru College Of Technology

- Final CGPA: 7.23

KEY SKILLS

Technical Skills: JavaScript, Python, SQL, HTML5, CSS3, Firebase, React, n8n, Git, Docker.

Soft Skills: Problem Solving, Remote Collaboration, Time Management.

CERTIFICATIONS

- Maiyyam – Full Stack (MERN) Web Development Traineeship (2024)
- Coursera – Python for Everybody (2025)
- Coursera – Python Data Structures (2025)
- Coursera – Foundations of Cybersecurity (2025)
- Coursera – 6G Deployment (2025)
- Cisco Networking Academy – Introduction to Packet Tracer (2024)

PROJECTS

WhatsApp Automation Suite for Small Manufacturers

- **Tech Stack:** n8n, Groq API, Twilio, Google Sheets API, Docker
- Engineered an end-to-end WhatsApp automation system for school accessory manufacturers
- Built an AI-powered order intake bot using Groq's Llama 3.3 70B to parse unstructured WhatsApp messages and auto-log structured order data into Google Sheets
- Automated confirmation replies and reduced response time from minutes to seconds
- Developed a dispatch notification system that polls Google Sheets and automatically alerts customers when orders are marked as "Dispatched"
- Self-hosted n8n using Docker for unlimited workflow execution and improved data privacy
- Used ngrok for Twilio webhook integration during development

IoT-Based Rubber Latex Cup Monitoring Device

- **Tech Stack:** Python, TFLite, MobileNetV2, Raspberry Pi, Twilio
- **GitHub:** <https://github.com/Ashxin/latex-cup-monitor>
- Deployed a MobileNetV2 binary classifier on Raspberry Pi 3 achieving 95.45% accuracy and 100% recall across 88 real-world test images
- Benchmarked MobileNetV2, ResNet50, EfficientNetB0, and DenseNet121 to identify the best accuracy-to-resource tradeoff for edge deployment
- Built a hybrid SMS alerting system using GSM800A and Twilio, reducing per-alert cost from ₹2.00 to ₹0.50
- Collected 573 real plantation field images to solve domain-shift issues caused by stock-image datasets
- Developed a yield analytics engine estimating per-tree latex production using classification timestamps and Rubber Board standards

Notes App

- **Tech Stack:** JavaScript, Firebase, Firestore
- **GitHub:** <https://github.com/Ashxin/notes-app>
- Built a full-stack note-taking application with Firebase Authentication and Firestore real-time synchronization
- Implemented CRUD functionality with real-time listeners and session persistence
- Deployed using Firebase Hosting with security rules and optimized database indexing

Weather Dashboard

- **Tech Stack:** JavaScript, OpenWeatherMap API
- **GitHub:** <https://github.com/Ashxin/weatherDashboard>
- Developed a real-time weather dashboard integrating OpenWeatherMap API using async/await
- Added 5-day weather forecasting and comprehensive API error handling
- Implemented saved cities functionality using localStorage
- Deployed using GitHub Pages
